RE: Sample Program for Site Remediation

Mr. Buckner-

Please find the attached Sample Program for Site Remediation. We have striven to address all of your concerns in a very short window of time. I hope all items have been addressed.

I was made aware yesterday that two of the fields chosen per the criteria set forth by EPA are currently planted with wheat. This wheat will be harvested late June or early July. Once the wheat is harvested the two fields will be available for sampling. (NW 32-17-36 and SE 36-17-37).

The other three locations should be able to be sampled in April or May.

I have not received the laboratory standard sample processing procedure as of yet. Once I receive this process I will forward to you.

In the event you have any questions please contact my office.

Sincerely,

Terry D. Bobo, PCHMM, REM, CRM/EPA

President

for an environment we can all live with today & tomorrow
